Description of the program: Dengue viruses are spread to people through the bite of an infected <i>Aedes</i> species mosquito. Almost half of the world's population, about 4 billion people, lives in areas with a risk of dengue. Dengue is often a leading cause of illness in areas with risk. A mosquito-borne viral disease occurring in tropical and subtropical areas. Those who become infected with the virus a second time are at a significantly greater risk of developing severe disease. Symptoms include high fever, headache, rash and muscle and joint pain. In severe cases there is serious bleeding and shock, which can be life threatening. Treatment includes fluids and pain relievers. Severe cases require hospital care. P.S.V. College of Engineering And Technology YRC Unit in association with Elathagiri Panchyat Office conducted a dengue awareness programme to create awareness about dengue virus among the college and school students. Pamphlets and notices have been distributed and also awareness rally will be conducted in elathagiri, village .Speaking on the Occasion Dr.L.P.Vettrivelan said "Severe dengue happens when your blood vessels become damaged and leaky. And the number of clot-forming cells (platelets) in your bloodstream drops. This can lead to shock, internal bleeding, organ failure and even death. Due to wide publicity and awareness programmes in the district, total numbers of dengue virus has been reduced.
